

This CD-ROM contains supplemental materials for the book "Designing Audio Objects for Max/MSP and Pd" by Eric Lyon. The book is published by A-R Editions, Inc.

The book explicates the code provided here. In most cases, it is intended that the reader should expand on, and further develop this code, as part of the learning process. Therefore, we have released the code with a variant of the MIT License, so that you may have the greatest possible freedom in how you use, and/or distribute, any derivative software that you may develop, based on the code on this CD-ROM.

If you have obtained this code without purchasing "Designing Audio Objects for Max/MSP and Pd," you have the same freedom in this software afforded by the MIT License as owners of the book. However, please note that some of the code contained here is deliberately left unfinished, un-optimized, and in a few cases un-debugged, for pedagogical purposes which are made clear within the main text of the book. For that reason, we believe that the contents of this CD-ROM will be of the greatest value when used in conjunction with the book "Designing Audio Objects for Max/MSP and Pd."

There are a few items here that are not covered under the MIT License. The Max/MSP projects directory contains the c74support folder. The contents of this folder are the property of Cycling '74 who have kindly granted A-R Editions the right to include this folder on this CD-ROM. However Cycling '74 retains all rights to those materials, which may not be distributed further without express permission from Cycling '74. If you distribute software that you developed based on materials on this CD-ROM, please be sure that you do not distribute the c74support folder.

The code file "moogvcf~.c" is based on the Csound unit generator "moogvcf." Since Csound is released under the GNU LGPL, we have also released the code for the Max/MSP and Pd ports of "moogvcf" under the LGPL for consistency. The rights granted by the LGPL are similar to those granted by the MIT License. For more information, please see: www.gnu.org/licenses/lgpl.html

All other code on this CD-ROM is released under the following license:
