

Welcome to the CD-ROM accompanying the book "Designing Audio Objects for Max/MSP and Pd" by Eric Lyon. The book is published by A-R Editions, Inc. Contained on this CD-ROM are complete code and projects for all of the Max/MSP and Pd audio objects described in the book. The Max/MSP code is provided with project files suitable for compilation on both Mac OS and Windows operating systems. The Pd code is provided in formats suitable for Linux, Mac OS, and Windows. Executables of the Max/MSP and Pd externals are provided in all formats, along with accompanying help files. The complete set of code Figures from the book may be found in the folder "Complete Code Figures." For your convenience, a ZIP archive of the contents of this CD-ROM is provided in the folder CDR, should you wish to copy this CD-ROM to your computer.

Since the book encourages creative exploration and further development of this code, we chose to license the code in such a way that you, the reader, will have maximum freedom to do what you want with it in your experiments. You may employ them in your musical performances and compositions, share them publicly, or even incorporate them into commercial applications. Please see the accompanying file "License" for further information.

I hope you will have a great deal of fun as you work through these projects in the book. They are not just pedagogical exercises, but also powerful tools for musical creation and exploration. As your skills at coding expand, so will your opportunities for innovative musical expression. It would please me greatly to encounter creative new software and music from readers of this book, so please let me know what you get up to with it.

Best wishes for success in all of your musical endeavors!

Eric Lyon
